---

This catalogue was commenced in the year 1867 for use in arranging the collections of the School of Mines of Columbia College, but after many months' labor, when the work was nearly completed up to that date, it was abandoned on account of the press of other duties. The collections have since that time increased to such an extent that the necessity of a Museum catalogue has impressed itself upon me many times, but other duties prevented my taking it up. In the year 1885, however, having occasion to make some investigations and finding it almost impossible to get at the different synonyms of the various minerals on account of the imperfections of the indices of the various works, the work was taken up again and finished.

It was found that the progress of the science since 1867 had been so great that the work previously done had to be altogether abandoned, so that all that is left of it is the general plan. It is hardly to be hoped that this catalogue is without errors, or that every name which has been published has been found. There are, however, several thousand more names contained in it than in any other published index.

In doing the work there have been consulted first of all the collections of the School of Mines, and also the following works:

- (1) Dana's System of Mineralogy Fifth edition. New York, 1875.
- (2) Dana's first, second, and third Supplements. New York.
- (3) American Journal of Science.
- (4) Elemente der Mineralogie. Naumann. Tenth edition. Leipsic. 1877.
- (5) Cours de Minéralogie. Delafosse. 3 vols. Paris, 1862.
- (6) Traité de Minéralogie. Dufrenoy. 5 vols. Second edition. 1859.
- (7) Websky die Minerale Species. Breslau, 1868.
- (8) Readwin's Index Mineralogy. London, 1867.
- (9) Bristow's Glossary Mineralogy. London, 1861.
- (10) Plattner's Blowpipe Analysis. New York, 1873.
- (11) Cleaveland's Mineralogy. Second edition. 1822.
- (12) The Bulletin de la Société Minéralogique de France.
- (13) Zeitschrift für Krystallographie und Mineralogie.
- (14) Mohs's Grundriss der Mineralogie. Dresden, 1822.
- (15) Haidinger's Translation of Mohs. Edinburgh, 1825.
- (16) Mineralogical Magazine. London.
- (17) Tabellarische Übersicht der Mineralien. Groth. Third edition. 1889.
- (18) Neues Jahrbuch für Mineralogie, Geologie und Paleontologie.
- (19) Tschermak's Mineralogische und Petrographische Mittheilungen.

None of these have been found, after careful observation, to have had a complete index. The need of such a collection of synonyms has been such a necessity in the management of the collection of the School of Mines that it is hoped it will be found to be useful in other museums.

The first edition of this catalogue was published as Bulletin No. 33 of the U. S. National Museum. For the preparation of this edition the plates of the first edition, which were loaned by the authorities of the National Museum for this purpose, were copied, and the pages were made up in single columns, with wide margins for notes. All the errata and addenda of the first edition were incorporated in the text, and many additions, and such changes as the progress of the science called for, made.

Since the publication of the second edition a third has become necessary, and for this a thorough revision of the whole work has been made and such changes have been introduced and such names added or placed among the synonyms as the progress of the science made necessary. As far as possible the names of rocks have been omitted, except in such cases as they are also names of minerals. The names of well-authenticated species have been printed in capitals, those of doubtful species in italics, and those of synonyms in ordinary type. As far as possible the name of the authority for the species has been given in italics. The synonyms under each species, where that is necessary, have been divided into classes, which are printed in small capitals, and their synonyms are arranged alphabetically for convenience in referring to them. The symbols representing the composition of the minerals have been given according to the new system, as that seems mostly to accord with the modern usage.

In the orthography of the species and synonyms English, French, and German spellings have been most frequently adopted. The Spanish and Italian have only occasionally been given, as they do not differ essentially from those of the other three languages. It must be remembered, in looking for a name, that *c* and *k*, and *i* and *y*, are frequently interchangeable. In some cases *cc* is equivalent to *ck*, and *ff* is equal to *w*. For the most part the names, with the exception of the termination, are the same in all languages. The termination *ite* has usually been given, and its equivalent *it*, *ith*, or *ita* has generally not been repeated. In the first edition no attempt was made to prove that the names in italics which follow the various names and synonyms are those of the *original describers* of the species. For this edition a great amount of time and labor has been expended to discover if possible the authors of the species, and it is believed that if, in some cases, the original describer of the mineral has not been found, the names given are, at least, those of the persons by whom they were first used or to whom the species have been credited by some prominent authority.

From the great advantage which has been felt in the use of this edition, while it was in proof, in arranging the collections of the School

of Mines, it is hoped that it will prove useful elsewhere. The proof of this edition has been read by Dr. A. J. Moses, Adjunct Professor of Mineralogy in the School of Mines. I am much indebted to him, both for the careful reading of the proof and for many excellent suggestions which I have been very glad to adopt.

## PREFACE TO THE SECOND EDITION.

---

THE first edition of this catalogue was published as Bulletin No. 33 of the U. S. National Museum. For the preparation of this edition the plates of the former one, which were loaned by the authorities of the National Museum for this purpose, have been copied, and the page has been made up in single columns, with wide margins for notes. All the errata and addenda have been incorporated in the text, and many additions, and such changes as the progress of the science called for, have been made. Other changes were prepared, but by a misunderstanding the book was printed before they were inserted.

In the orthography of the species and synonyms English, French, and German spellings have been most frequently adopted. The Spanish and Italian have only occasionally been given, as they do not differ essentially from those of the other three languages. It must be remembered, in looking for a name, that *c* and *k* and *i* and *y* are frequently interchangeable. The termination *ite* has usually been given, and its equivalent *it* has generally not been repeated. In the first edition no attempt was made to prove that the names in *italics* which follow the various names and synonyms are those of the *original describers* of the species. For this edition, a great amount of time and labor has been expended to discover if possibly the authors of the species, and it is believed that if in some cases the original describer of the mineral has not been found, the names given are, at least, those of the persons to whom the species has been credited by some prominent authority. From the great advantage which has been felt in the use of this edition, while it was in proof, in managing the collections of the School of Mines, it is hoped that it will prove useful elsewhere. The proof of this edition has been read by Dr. A. J. Moses, Adjunct Professor of Mineralogy in the School of Mines. I am much indebted to him, both for the careful reading of the proof and for many excellent suggestions which I have been very glad to adopt.

- Zavalite**. See Zaratite.
- Zeagonite**. See Gismondite.
- Zeasite**. See Opal.
- Zeilanite**. See Spinel.
- Zellkies**. See Marcasite.
- Zeolite**. See Natrolite and Stilbite.
- Zéolite**. See Zéolithe.
- Zeolite, cubic**. See Analcite and Cha-  
 bazite.
- Zeolite, efflorescing**. See Laumontite.
- Zeolite, feather**. See Natrolite.
- Zeolite, fibrous**. See Natrolite.
- Zeolite, foliated**. See Stilbite and Heu-  
 landite.
- Zeolite, mealy**. See Laumontite.

- Zeolite, needle.** See Natrolite.
- Zeolite of Brisgau.** See Calamine.
- Zeolite, pyramidal.** See Apophyllite.
- Zeolite, radiated.** See Stilbite.
- Zeolites albus fibrosus, capillaris, etc.**  
See Natrolite.
- Zeolites bloa.** See Lapis Lazuli.
- Zeolites cryst., crystalli ad centrum tendentes.** See Stilbite.
- Zeolites crystallisatus, prismaticus, capillaris.** See Natrolite.
- Zeolites facie Selenitica lamellaris.**  
See Stilbite.
- Zeolith von Hellesta.** See Apophyllite.
- Zéolithe bleue.** See Lapis Lazuli.
- Zéolithe calcaire.** See Pectolite.
- Zéolithe commune.** See Stilbite.
- Zéolithe cubique.** See Analcite and Chabazite.
- Zéolithe d'Ædelfors.** See Laumontite.
- Zéolithe de Borkhult.** See Anorthite.
- Zéolithe d'Hellesta.** See Apophyllite.
- Zéolithe de Salpach.** See Faujasite.
- Zéolithe de Suède.** See Spodumene.
- Zéolithe de 24 facettes.** See Analcite.
- Zéolithe dure.** See Analcite.
- Zéolithe efflorescente.** See Laumontite.
- Zéolithe en aiguilles.** See Natrolite.
- Zéolithe farineuse.** See Laumontite.
- Zéolithe feuilletée.** See Stilbite.
- Zéolithe fibreuse.** See Natrolite.
- Zéolithe lamelleuse.** See Heulandite.
- Zéolithe leucitique.** See Analcite.
- Zéolithe nacrée.** See Stilbite.
- Zéolithe noire.** See Gadolinite.
- Zéolithe radiée.** See Natrolite.
- Zéolithe rayonnée.** See Stilbite.
- Zéolithe rouge de Tyrol.** See Fassaitte.
- Zéolithe rouge d'Upsal.** See Laumontite.
- Zéolithe tenace.** See Okeaitte.
- Zéolithe verdâtre.** See Prehnite.
- Zeolithus albus cubicus Islandiæ.**  
See Chabazite.
- Zeolithus cæruleus.** See Lapis Lazuli.
- Zeolithus lamellaris major.** See Apophyllite.
- Zeolithus vitreus electricus.** See Tourmaline.
- ZEPHAROVICHITE, Boricky.**  $\text{Al}_2\text{P}_2\text{O}_8$   
+5  $\text{H}_2\text{O}$ . Orthorhombic.
- Zerreiblicher uranokker.** See Uranconite.
- Zeugite.** See Metabrushite.

- ZEUNERITE**, *Weisbach*.  $\text{CuU}_2\text{As}_2\text{O}_{12} + 8\text{H}_2\text{O}$ . Tetragonal.
- Zeuxite*, *Thom*.  $\text{FeO}$ ,  $\text{Al}_2\text{O}_3$ ,  $\text{SiO}_2$ .
- Zeylanite**. See Spinel.
- Zianite**. See Cyanite.
- Ziegelerz**. See Cuprite.
- ZIETRISIKITE**, *Dana*.  $\text{C}_2\text{H}_{22}$ . Cire fossile de Moldavie, *Magnus*; ozocerite; ozockerite, *Malaguti*.
- Zigueline**. See Cuprite.
- Zillerthite**. See Amphibole.
- ZIMAPANITE**, *Del Rio*.  $\text{VCl}_3$ . Hexagonal.
- ZINC**.  $\text{Zn}$ . Hexagonal. *Calaëm*, *Labavius*; zink; zinken, *Paracelsus*.
- Zinc arsenate**. See Adamite and Köttigite.
- Zinc azurite**. See Azurite.
- Zinc blende**. See Sphalerite.
- Zinc bloom**. See Hydrozincite.
- Zinc bromide**. See Bromide of Zinc.
- Zinc calamine**. See Calamine.
- Zinc carbonate**. See Hydrozincite and Smithsonite.
- Zinc carbonaté**. See Smithsonite.
- Zinc carbonaté hydreux**. See Hydrozincite.
- Zinc glance**. See Calamine.
- Zinc hydraté**. See Hydrozincite.
- Zinc hydraté cuprifère**. See Tyrolite.
- Zinc hydro-carbonaté**. See Hydrozincite.
- Zinc iodide**. See Iodide of Zinc.
- Zinc-iron-manganese gahnite**. See Gahnite.
- Zinc iron spar**. See Smithsonite.
- Zinc lead spar**. See Cerussite.
- Zinc ore, red**. See Zincite.
- Zinc oxide**. See Zincite.
- Zinc oxyde**. See Zincite.
- Zinc oxydé**. See Calamine and Zincite.
- Zinc oxydé ferrifère**. See Zincite.
- Zinc oxydé rouge**. See Zincite.
- Zinc oxydé silicifère**. See Calamine and Willemite.
- Zinc oxysulphuret**. See Voltzite.
- Zinc phosphate**. See Hopeite.
- Zinc selenide**. See Culebrite.
- Zinc silicate**. See Calamine and Willemite.
- Zinc spar**. See Smithsonite.
- Zinc spinel**. See Gahnite.
- Zinc staurolite**. See Staurolite.
- Zinc sulfuré**. See Sphalerite.

- Zinc sulphaté.** See Goslarite.
- Zinc sulphate.** See Goslarite and Zincosite.
- Zinc sulphide.** See Sphalerite and Wurtzite.
- Zinc sulphuret.** See Sphalerite and Wurtzite.
- Zinc vitriol.** See Goslarite.
- ZINCITE,** *Dana.* ZnO. Hexagonal. Brucite, *Dufr.*; chalcocincite; hydrocinit; oxide of zinc; oxyde de zinc; oxyde rouge de zinc; oxyde zincique; prismatic zinc ore, *Mohs*; red oxide of zinc, *Bruce*; red zinc ore, *James*.; red zinc oxide; rothzinkerz; spartaite, *B. & M.*; sterlingite, *Alger*; stirlingite; zinc oxide; zinc oxidé ferrière; zinc oxidé rouge; zinconine zinconise, *Beud.*; zinkit, *Haid.*; zink oxyd, *Leonh.*
- Zinckenite.** See Zinkenite.
- Zinconine.** See Hydrozincite and Zincite.
- Zinconise.** See Hydrozincite and Zincite.
- Zincosite.** See Zinkosite.
- Zincum acidæ aëro mineralisatum.** See Smithsonite.
- Zincum cum Fe, S, mineralisatum.** See Sphalerite.
- Zincum naturale calciforme.** See Calamine.
- Zincum spatosum cinerum electricum.** See Calamine.
- Zincum spatosum flavescens drusicum.** See Calamine.
- Zincum S, As, et Fe, mineralisatum.** See Sphalerite.
- Zink.** See Zinc.
- Zinkaluminite,** *Bertrand and Damour.*  $Zn_4Al_6S_2O_{21} + 18H_2O$ .
- Zinkarseniat.** See Köttigite.
- Zinkazurite,** *Breit.*  $ZnSO_4, CuCO_3,$  etc. Crystalline.
- Zinkbaryte.** See Calamine.
- Zinkbleispath.** See Cerussite.
- Zinkblende.** See Sphalerite.
- Zinkblüthe.** See Hydrozincite.
- Zinkeisenspath.** See Smithsonite.
- Zinken.** See Zinc.
- ZINKENITE,** *G. Rose.*  $PbS, Sb_2S_3$ . Orthorhombic. Antimoine sulfuré plombifère; bleiantimonglanz; zinckenite.
- Zinkit.** See Zincite.
- Zinkosite,** *Breithaupt.*  $ZnSO_4$ . Orthorhombic. Anhydrous sulphate of zinc; zincosite; zinc sulphate.
- Zinkfahlerz.** See Tennantite.

**Zinkglas.** See Calamine.

**Zinkglaserz.** See Calamine.

**Zinkkieselerz.** See Calamine.

**Zinkoxyd.** See Zincite.

**Zinkphyllit.** See Hopeite.

**Zinkspath.** See Smithsonite.

**Zinkspinell.** See Gahnite.

**Zinkvitriol.** See Goslarite.

**Zinn.** See Tin.

**Zinn, gediegen.** See Tin.

**Zinn, geschwefeltes.** See Stannite.

**Zinnerz.** See Cassiterite.

**Zinnkies.** See Stannite.

**Zinnober.** See Cinnabar.

**Zinnstein.** See Cassiterite.

**Zinnwaldite.** See Lepidolite.

**ZIPPEITE**, *Dana*.  $(U_2O_3)_3(SO_3)_2 + nH_2O$ . Crystalline. Basisches schwefelsaures uranoxyd, *John*; carbonate of uranium; dauberite, *Adam*; uranbloom, *Zippe*; uranblüthe, *Zippe*; urane oxydé terreux, *H.*; urane oxydé hydraté; uranium basic sulphate; uranium ochre, *Nicol*; uranium sulphate; uranochre, *Vogl*; uranocker; uranocre; verwitterter uranvitriol, *John*.

*Zircarbite*, *Shepard*. Yellowish brown mineral of Rockport, Mass.

**ZIRCON**, *Werner*.  $ZrSiO_4$ . Tetragonal. *Ανυκτίριον*, *Theoph.* Adelpolite(?), *Nord.*; beccarite; calyptolite, *Shep.*; Ceylon zircon; chrysolithos(?) pt., *Pliny*; crateritis(?), *Plin.*; cyrtolite; diamant brut, *de Lisle*; engelhardt, *Hofm.*; false diamond; grenat à prisme quadrilatère, *Faujas*; hyacinthe, *Faujas*; hyacinthe pt., *de Lisle*; hyacinth; hyacinth la bella; hyazinth; jacinta la bella; jargon, *Cronst.*; jargon de Ceylan, *de Lisle*; jargon de diamant; jargon; jargon, *Wall.*; kaliptolite; lapis lyncurium; ligure; lyncurion; lyncurium, *Theoph.*; melichrysos(?), *Pliny*; mock diamond; ostranite, *Breit.*; pyramidal zircon, *Mohs*; silicate of zirconia, *Klapr.*; topazius pt., *Wall.*; zirconite, *Schum.*; zirkon, *Wern.*

**AZORITE**, *Dana*: Açorite, *Dufr.*; new minerals from Azores, *Tesch.*; tanta late de chaux.

**ERDMANNITE**, *Esmarck*.

**Zirconite.** See Zircon.

**Zirkon.** See Zircon.

**Zirlite**, *Pichler*. Near Gibbsite.

**Zöblitzer serpentine.** See Serpentine.

**Zöblitzite.** See Serpentine.

**Zölestin.** See Celestite.

**ZOISITE**, *Werner*.  $H_2Ca_4(Al_2)_3Si_6O_{26}$ . Orthorhombic. Calcareous epidote; dyskolite; épidote pt., *H.*; épidote calcaire; illuderite, *Leonh.*; lime epidote; saualpit, *von Zois*; saualpitite; thulite, *Brooke*; unionite, *Silliman*.

**Zoned agate.** See Quartz.

**Zonochlorite.** See Prehnite.

**Zootinsalz.** See Soda Nitre.

**ZORGITE**, *Brooke & Miller*.  $Cu_{18}Pb_2Se_{11}$ . Massive. Copper and lead selenide; glasbachite, *Adam*; raphanosmit, *von Kob.*; selenbleikupfer, *H. Rose*; selenblei mit selenkupfer, *H. Rose*; selen-copper-lead; selenide of copper and lead; séléniure de plomb et de cuivre; seleniuret of lead and copper; selenkupferblei selensilberkupferblei.

*Zorodon, Bonjean.*

**Zuisang.** See Lapis Lazuli.

**Zundererz.** See Jamesonite.

**ZUNYITE**, *Hillebrand*.  $(Fe, K_2, Na_2, H_2Li_2)_3Al_3Si_3O_{27}$ . Isometric.

**Zurlite.** See Melilite and Wollastonite.

**Zurlonite.** See Wollastonite.

**Zweiaxiger glimmer.** See Muscovite.

**Zwieselite.** See Triplite.

*Zwitter from Altenberg.*

**Zygadite.** See Albite.
